

Easter Lily Care

To get the most enjoyment and success from your lily, please follow these instructions:

Location - Blooming plants last longer if they are kept cool, out of drafts, away from heat sources and in bright to medium light.

Water - Keep soil evenly moist, allowing only soil surface to become dry. Discard drainage.

Fertilization - Do not fertilize when in bloom. Fertilize lightly at other times.

Your Easter Lily may be planted outdoors after danger of frost is past and foliage has died back. It will winter over if planted in a protected area. Easter Lilies flower naturally in May.
